## **HOW IT WORKS**

\*Internal data only. Level of reduction has not been verified by IAPMO R&T. Products should not be used to meet EPA MLC levels without comprehensive water testing and consultation with WaterTech™ technical support.

Water flows into the system through the industry-leading Triton control valve that anticipates usage and self-initiates cleaning, making it 40-50% more efficient in energy, water and salt conservation.

Water then flows into the industrial-grade composite tank and through the positively charged TechSelect resin addressing chlorine and the "slippery" soft water feel.

Next, water flows through the negatively charged TechSoft resin reducing or removing hardness, iron\* and lead\* (certified to NSF 42/44)

Clean, filtered water then flows effortlessly through the efficient AquaHelix™ plate and is delivered to your home providing better tasting, healthier water and cleaner laundry, softer skin, easier cleaning, as well as soap, energy, and appliance savings.

When the Triton control valve indicates the TechSelect/TechSoft resins need to be cleaned and recharged, it automatically initiates the process using salt solution from the brine tank, in concert with the AquaHelix $^{\text{TM}}$  plate, to efficiently lift and clean the resin while providing significant salt and water savings due to its revolutionary design.
